Monroe, Ohio 45050

Re: Letter of Recommendation

Dear Mr. Tarkington:

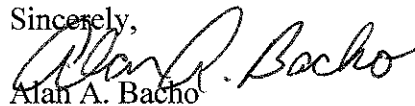

I am sending this letter to commend Four Seasons Environmental (FSE), and specifically Robert Stokes, for their efforts on the recently completed Sylvania City School District Building Projects. We were very pleased with the performance of Bob throughout the course of this project.

As you are well aware this was a project with a \$79.5M budget and a very tight time table. The project involved the replacement of the 3 oldest buildings in the District and renovations and additions to the other 9 buildings over a 3 year time frame. All of the buildings received significant upgrades to their HVAC systems with the most significant being the addition of air conditioning to the Elementary buildings and the 3 new buildings were built with Geo-Thermal HVAC systems. Obviously all of these systems and their controls (while being very energy efficient) are also very sophisticated and therefore require someone who really understands how the entire system has been designed to function in order to commission them. Bob really brings that ability to the project. Bob was able to communicate with the Engineers to really understand their design and he was able to interact with the contractor(s) to make sure that the systems were installed to function as they were designed to do.

I found that Bob was always able to work in a very professional manner with all parties involved in the project. Bob was also always very good at documenting his findings and making sure that everyone involved in the project was aware of issues he found and what corrections they needed to make.

I am convinced that the Commissioning services provided by Four Seasons and Robert Stokes were critical to the success of our building project. Please feel free to use this as a letter of reference and I would be happy to talk to any potential future Four Seasons clients to answer any questions they may have regarding this project and more specifically the role that Four Seasons and Bob played in bringing this project to fruition.

Sincerely,

Alan A. Bacho  
Director of Facilities
